

hTERT-HPNE

Cat. No. ARI0244, 1×10^6 cells/vial

Description

The hTERT-HPNE cell line is an hTERT-immortalized epithelial cell line derived from the human pancreatic duct. It was established by transducing hTERT cDNA into primary human pancreatic duct cells. These cells express the neuronal stem cell marker Nestin. The immortalization process extends their lifespan while preserving key non-cancerous characteristics, such as a diploid karyotype and the expression of wild-type p16(INK4a), p53, and K-Ras.

Specification

Cell Type: Pancreatic ductal cell line

Tissue/Organ: Pancreas

Derived from Site: Pancreas, duct

Disease: N/A

Species: Homo sapiens (Human)

Genetic Background: N/A

Marker: N/A

Sex of Donor: Male

Age: 52 years

Immortalization Method: hTERT

Shipping & Storage

Shipping condition: Frozen on dry ice.

Storage condition: Liquid nitrogen (LN₂) cryopreservation.

Intended Use

This product is intended for laboratory in vitro use only. It is not intended for diagnostic, therapeutic, or clinical applications.

Culturing Guidance

Morphology: Epithelial-like

Growth Mode: Adherent

Temperature: 37°C

Atmosphere: 5% CO₂

Unpacking and Storage Instructions

1. Visually inspect all packaging components for integrity and verify adequate dry ice.
If any damage is observed, notify Ascent Technical Support immediately.
2. Prioritize transfer to liquid nitrogen vapor phase storage system (-130°C or below).
Secondary option: -80°C mechanical freezer (short-term storage only).
Always maintain temperature strictly below -65°C.

Disclaimer
